Education

National Institute of Technology, Hamirpur — Hamirpur, HP
Bachelor of Technology in Computer Science and Engineering — CGPA: 8.41/10 — *August 2024 – July 2028*

Technical Skills

Languages: C++, Python, TypeScript, JavaScript
Web & AI: React, Vite, Zustand, AG Grid, Node.js, Express.js, REST APIs, Gemini API, PayPal APIs, HTML/CSS
Databases & Tools: SQLite, MongoDB, Prisma, Git, GitHub Actions, Vercel, Render, Vitest, Postman
Coding Profiles: LeetCode: 350+ problems solved (195 Medium, 25 Hard)

Experience

App Team (Technical Club) — Hamirpur, HP
Web Developer — *March 2025 – August 2025*

- Co-developed the club's website with one other member, owning most of the React frontend.

.exe (Technical Club) — Hamirpur, HP
Technical Member — *January 2025 – March 2025*

- Supported technical setup and live troubleshooting for Pre-Nimbus (200+ attendees).

Projects

Synq — Serverless Synthetic Data Engine & API Mocker — Live | GitHub
TypeScript, React, Zustand, Vitest, GitHub Actions, Vercel

- Built a relational generator over user-defined schemas: a **topological sort of foreign-key dependencies** guarantees referential integrity and names cycles, with Box-Muller sampling, weighted enums, and regex-constrained fields.
- Designed a browser-only mock REST API with a **chaos layer** injecting latency and 500/429/404 before routing, so faults never mutate state; **live observability dashboard** (throughput, latency histogram, p95) in hand-written SVG.
- Reused the schema graph to emit TypeScript interfaces and dependency-ordered SQL alongside CSV/JSON; cut the initial bundle **601 to ∼200 kB** via lazy loading, with an injectable RNG backing 239 deterministic tests in CI.

Tend — AI Back Office for Small PayPal Sellers — Live | GitHub
PayPal Hackathon 2026 · React, Node.js, Express.js, Gemini API, PayPal APIs, AG Grid, Render

- Built an agent that pulls overdue invoices, refunds, disputes and low stock from PayPal into one **AG Grid approval queue**; Gemini proposes an action for each item as structured JSON, and typed commands ("show refunds over $30") become checked Grid API calls with undo.
- Kept money decisions away from the AI: **shared server/browser rules** cap refunds at the amount paid, the server **re-prices every plan** from fresh PayPal data, and **idempotent request IDs** prevent double refunds.

ProtPocket — Computational Drug Discovery Research Prototype — GitHub
*TypeScript, React, Go, AlphaFold, AutoDock Vina, Mol**

- Led the frontend migration to **TypeScript** and built the binding-pockets panel (React + Go) for a deployed tool that ranks drug-binding pockets with a **Gap Score** heuristic (team of 3).
- Fixed **AutoDock Vina** docking failures by sanitizing PDBQT files in the Go docking service.

Open Source

Vercel Labs | *skills, agent-skills — 2 merged PRs* — PR #1450 | PR #52

- Added skill-origin reporting to the `skills list` CLI (GitHub-installed vs. local skills).
- Rewrote a React performance rule as **"Avoid Layout Thrashing"** with read-then-write batching.

Compass Calendar | *React, TypeScript — 2 merged PRs* — PR #1592 | PR #1799

- Unified datepicker navigation icons and fixed the anonymous-user icon's semantic color.

Awards & Achievements

HackSecure 2026: Winner, Best All-Girls Team, for a 48-hour Android network analyzer
Flipkart GRiD 2026: National Semi-Finalist
